# OUR SERVICES

## DESIGN AND ENGINEERING

Designing products and transforming them from a concept or prototype into a usable item that appeals to customers.

## CONSULTING

Get expert advice for specific business solutions and improve business performance in terms of operations, profitability, management, structure, and strategy.

## SUPPLY OF SYSTEM

Supply of Equipment, facilities, methods, and personnel employed in accurate and timely provision of items required in a process, program, or project.

## SUPERVISION

Accomplish department objectives by supervising staff, organizing, and monitoring work processes.

## INSTALLATION AND INTEGRATION

Establish service by studying system requirements; ordering and gathering components and parts; completing installation; performing acceptance tests.

## TESTING AND COMMISSIONING

Testing and commissioning are carried out on installations to ensure that they are safe and meet the design requirements.

## PROJECT MANAGEMENT

Planning and designation of project resources, budgets, monitoring progress, and keeping stakeholders informed the entire way.

## FACILITY MAINTENANCE & MANAGEMENT

Maintenance activities include keeping spaces, structures, and infrastructure in proper operating condition in a routine, scheduled, or anticipated fashion to prevent failure or degradation.

# OUR TECHNOLOGY PARTNERS

## Our Solutions

# Security Systems

Our Integrated Security Management Systems group assists our enterprise customers to work through complex business and technology issues to provide a straight-forward approach to security systems. Our security professionals bring deep technology skills and industry knowledge to your organization and work closely with you to design and implement a security solution that is aligned with your business objectives

In the e-business world, we are committed to demonstrating how security can improve your customers' trust in you. We know that security initiatives, when executed with business goals in mind, can decrease risk, reduce costs, improve productivity, increase availability, and allow rich and secure interaction with employees, business partners and customers.

## Securing the future

We provide a variety of integrated security management systems & solutions to elevate security and harden your infrastructure. Our security team is keen to leverage security and safeguard your assets from intruders.

# OT & IoT Cyber Security

## Solutions for Organizations with **CRITICAL INFRASTRUCTURES**

### Technology Focus

- **IT/OT Segmentation** – Micro/Macro Segmentation
- **Assets Discovery Solution** – Threat Intelligence
- **Layer\_0 Protection** – Industrial Firewalls – SRA
- **IoT Gateways** – DFIR - Scada Pen Testing
- **Vulnerability Assessment** – Industrial SOC – CASB
- **OT Cyber Security Operations Platform** – Secure Patching Industrial IOT (IIOT) Cloud

## WE PROTECT NETWORKS, SYSTEMS, & DEVICES

- ✓ Minimize Risks
- ✓ Maximize Operational Resilience
- ✓ Exceptional Network Visibility
- ✓ Threat Detection
- ✓ Assures Integrity, Confidentiality and Availability of your Trusted Systems and Data
- ✓ Provides Hardened Network Security Checkpoints for Absolute Threat Prevention
- ✓ Ensures Reliability and Safety through the OT Zero Trust Methodology

**VANTAGE** - Leverage the scale and simplicity of software as a service (SaaS) for unmatched security and visibility across your OT, IoT, and IT networks.

- Analyze all ICS, OT and IoT devices on your networks
- Gain immediate awareness of cyber threats, risks and anomalies
- Detect incidents and respond quickly

**GUARDIAN** - OT and IoT device discovery, network visualization, vulnerability assessment, risk monitoring and cyber threat detection – all in a single platform.

- Track vulnerabilities across ICS, OT and IoT assets
- Continuously monitor your OT network traffic and threats
- Rapidly identify anomalous behavior through AI-driven insights
- Improve incident response and compliance efforts

**CENTRAL MANAGEMENT CONSOLE** - Consolidate your OT and IoT risk monitoring and visibility across distributed sites.

- Aggregated summaries with quick drilldown for better root cause analysis
- Fast insight into key metrics, alerts, incidents, vulnerabilities and more
- Simplify security management tasks across sites and teams

**CYBER THREAT INTELLIGENCE** - OT and IoT threat and vulnerability intelligence helps you stay on top of emerging cybersecurity threats and new vulnerabilities.

- Rapid detection of cyber threats and vulnerabilities
- Eliminate alert fatigue with prioritized remediation steps
- Get actionable intelligence to improve mean-time-to-detect (MTTD)

**IT & IoT ASSET INTELLIGENCE** - Delivers a 70% reduction in the volume of alerts, allowing you to focus on the OT and IoT incidents that matter and respond faster.

- Deep insight into your ICS, OT and IoT devices
- Easily distinguish between malicious and benign behaviors
- Detect maintenance issues, required updates, and active threats

**SMART POLLING** - A powerful combination of active + passive asset discovery and analysis.

- Comprehensive IT, OT and IoT device data
- Continuous monitoring and cyber threat detection
- Up-to-date vulnerability data for ICS, OT and IoT devices from publicly shared sources
- Maintain up-to-date centralized configuration data for connected assets

**REMOTE COLLECTORS** - Low resource physical and virtual sensors that collect ICS, OT & IoT asset details and network data in remote sites.

- Capture data from distributed locations to send to Guardian for analysis
- Improve visibility while reducing deployment costs
- Embedded container sensor to leverage your ruggedized devices.

**OWL** Cyber  
Defense

**Assuring the Integrity, Confidentiality,  
and Availability of your trusted  
systems and data**

Owl Cyber Defense cross domain, data diode, and portable media solutions provide hardened network security checkpoints for absolute threat prevention and secure data availability.

Certified by the U.S. government, independent testing authorities, and international standards bodies, Owl technologies and services help to secure the network edge and enable controlled unidirectional and bidirectional data transfers.

For over 20 years, clients worldwide in defense, intelligence, and infrastructure have trusted Owl's unmatched expertise to protect networks, systems, and devices.

- **CROSS DOMAIN SOLUTIONS**
- **DATA DIODES**
- **SECURE COLLABORATION SOLUTIONS**
- **EMBEDDED CYBER SECURITY**
- **REMOVEABLE MEDIA SECURITY**

**The Leader of OT Zero Trust**

**Never trust, always verify. TXOne safeguards your OT operation with OT-native solutions, protecting assets for their entire life cycle.**

#### **SECURITY INSPECTION**

Conduct routine scans of stand-alone or specialized assets and conduct checkpoint scans of inbound and outbound devices with Portable Security, our installation-free portable scanner.

#### **END POINT SOLUTION**

Lock down legacy and modern assets with ICS-adaptive endpoint defense to ensure operational integrity.

#### **NETWORK DEFENSE**

Segment your network into productivity-based zones and shield vulnerable assets at the network level to improve defenses, streamline oversight, and prevent cyber incidents.

# Radio Frequency Identification Technology

RFID or radio frequency identification is a system that transmits identity in the form of a unique serial number of a product wirelessly.

RFID, a type of Auto-ID technology is used to reduce time and labor and improve real time data accuracy. Most commonly, an RFID tag consists of a microchip attached to a radio antenna mounted on a substrate. This technology connects products to the Internet for tracking purposes so that information can be shared with businesses across the supply chain.

- **Key Management System**
- **Textile Asset Management**
- **Guard Tour Management**
- **Digital Lock Management**

Radio-frequency identification (RFID) uses electromagnetic fields to automatically identify, and track tags attached to objects. In tracking products throughout the supply chain, often active and passive RFID systems are combined to provide gain visibility where products are in real time. Used with GPS technology, goods can now be tracked while in transit.

This can be especially useful in helping to reduce theft as products travel across the supply chain.

Managing and locating important assets is a key challenge for almost any business.

**RFID can provide accurate, real-time tracking data for fixed and mobile assets.**

# Parking Management System

We offer comprehensive range of Parking Guidance and Management solutions designed to make parking operations more convenient and efficient to the customers using different detection technologies and various information displays.

Our Technology partner offers a completely new type of parking management platform that can integrate multiple technologies into single seamless user experience.

Some examples of the technologies include space-specific ultrasonic and camera detection, induction loop counting for open areas, roadside guidance displays, dynamic displays connected to third party systems, license-plate recognition, and access control with RFID.

**Parking Guidance System** simplifies parking process, ensures highest possible occupancy, optimal space utilization, and offers convenience, stress-free experience to your parking customers

Frequency	Percentage
Never	10%
Sometimes	40%
Often	50%

***Your reliable partner in saving  
lives and properties***

From the fire detection control panel via highly sensitive detectors for a wide range of fire characteristics to acoustic and optical signaling devices, Dorman Smith offers a comprehensive product range for the installation of complete Fire Detection Systems.

# Emergency & Exit Light System

## Dorman Smith Emergency & Exit Light System

A reliable and total solution for safe evacuation.

The primary function of the emergency lighting is to ensure a fast and safe evacuation of the building in case of emergency. The escape route is marked with exit luminaires.

# Battery Monitoring System

An intelligent Online system with built-in web server, helps customers to monitor the state of battery online, knows battery health timely, reduces management costs.

It monitors and **measure battery voltage, charge and discharge current, internal temperature, internal resistance, SOC, SOH, environment temperature & humidity sensor and battery switch status.**

Battery Cell Voltage

Charge & Discharge Current

Internal Temperature

Environment Temperature & Humidity Sensor\*

Impedance

SOC (State of Charge)

SOH (State of Health)

Battery Switch Status and Alarm

## Dorman Smith Battery Monitoring System

*We take good care of every battery*

Aims to Extend Battery Life, Maintain Uptime and Maximize Return of Investment

# Port Security Systems

Port Security is part of a broader definition concerning maritime security. It refers to the defense, law and treaty enforcement, and counterterrorism activities that fall within the port and maritime domain. It includes the protection of the seaports themselves and the protection and inspection of the cargo moving through the ports.

- ✓ Vessel Identification (AIS) and Tracking
- ✓ Above Surface Radar Systems
- ✓ Swimmer Detection (Subsurface Intrusion)
- ✓ Underwater Inspection Systems (ROV/ Sonar)
- ✓ Surveillance & Reconnaissance Systems
- ✓ Entry/ Access Control Systems
- ✓ Cargo and Personnel Inspection Systems
- ✓ Visitor / Vehicle Registration Centers
- ✓ Perimeter Intrusion Detection Systems (PIDS)

Security risks related to ports often focus on either the physical security of the port, or security risks within the maritime supply chain.

Physical port security involves the risks to the perimeters of the port. Risks to port security involves natural risks such as hurricanes and flooding, man-made risks such as operator error, and weapon risks such as chemical, biological, and nuclear material. It also involves adequate security systems within the port, such as security guards, video surveillance and alarm systems.

# EV Charging Solutions

## High-Performance Charging Solutions

A reliable charging infrastructure is an elementary requirement for electric vehicles. Our partner offers various high-performance charging solutions for installations as original equipment in electric vehicles and industrial applications. The range includes charging station(hardware), installation and maintenance together with supplementary services such as the processing of payments for battery charging. The product meets all the relevant industry norms and standards and, therefore, the highest quality and safety requirements.

## Powerful Features

The Advantages of the Webasto Next

### Charging Capacity: Fast and Safe Charging

The Webasto Next is available as a 11 kW or 22 kW variant and it charges up to 10x faster than a common household power outlet.

### Backend: Controlled via Webasto Chargeconnect

The Webasto backend solution makes the Webasto Next really smart. Using Webasto ChargeConnect, you can control, manage and analyze your charging station wherever you are via the web-based portal and app.

### Cloud: Always Connected Online

The Webasto Next is always online via Webasto ChargeConnect, sending its data live to the backend. This means that all wallbox information is available to you for viewing at any time, thus always ensuring the seamless operation of your wallbox.

### Scan & Charge: Access Control for Users

You decide who is actually allowed to charge at your Webasto Next thanks to Scan & Charge. The user scans a QR code at the charging station, the wallbox recognizes the user authorization and then the charging process starts.

### Energy Meter: All Data Is Saved

All charging processes are recorded automatically by the integrated electricity meter. This enables you to evaluate all of your Wallbox data at a later date, thus always giving you an overview of the actual power consumption of the Webasto Next.

### Load Management: Avoidance of Load Peaks

The local dynamic load management of the Webasto Next is stand-alone\*. Each charging station is networked individually with the building's smart energy meter in order to provide demand-optimized use of the available total load.

### Energy Management: Smart and Efficient

The Webasto Next can be integrated into the energy management system (EMS) thanks to its communication interfaces, allowing you, for example, to directly charge your electric car via the excess power from the PV system.

## Webasto NEXT

The Smart Package for your Everyday Charging

### Comfort and Design: Extraordinarily Clever

The sleek, functional and high-quality design of the Webasto wallbox has been honored with the Plus X Award. The cable is neatly wound and stored thanks to a cable bracket and plug holder.

### LED Display: Always a Clear View of the Status

The Webasto Next displays the current status of the wallbox and shows status messages via the central LED strips, even during configuration.

### Price-Performance Ratio: Financial Advantage

The Webasto Next is available at an attractive price directly from Webasto or from selected Webasto dealers. Depending on the region, there may also be a government funding program available. Please check on this prior to purchase.

### Installation: Ready to Charge Quickly and Easily

The wallbox can be mounted either to a wall or a Webasto stand depending on the situation. Installation is performed by trained experts. Thanks to the integrated DC residual current protection, only a cost-effective type A RCCB needs to be added to the installation.

### Quality: Long-Lasting, Robust and Safe

Webasto manufactures these high-quality charging stations in Germany and in doing so also relies on the highest quality and safety standards. The robust housing as well as the selected technology always ensure seamless functionality.

# Field Instrumentation and System Automation (PLC)

Field instrument products includes a complete line of flowmeters, pressure transmitters, differential pressure transmitters, temperature transmitters, level transmitters, Fieldbus instruments and safety measurement instrumentation.

The principle and operation of measuring instruments that are used in design and configuration of automated systems in areas such as electrical and pneumatic domains, and the control of quantities being measured. They typically work for industries with automated processes, such as chemical or manufacturing plants, with the goal of improving system productivity, reliability, safety, optimization and stability. To control the parameters in a process or in a particular system, devices such as microprocessors, microcontrollers or PLCs are used, but their aim is to control the parameters of a system

Our Team provides Turn-key solutions including Design/ Construction/ Erection/ Testing and Commissioning for all kind of Industrial Field Instrumentation and System Automation (PLCs)

- Level Instrumentation
- Control Valves
- Flow Meters
- Pressure Instrumentation
- Standalone/ Interfaced PLC System

**Constructing reliable  
field instruments that  
can withstand even  
the most severe  
environments**

# NETWORKING SOLUTIONS

**Ruijie**

**INNOVATION**  
Beyond Networks

Ruijie Networks is an innovative ICT enterprise brand.

- Developed 8 product lines, including switches, routers, wireless, cloud class, security, gateways, IT management and authentication & accounting.
- 6 R&D centers, 59 branch offices, with over 50+ countries coverage
- Founded in 2000, Ruijie has been building in-depth scenario-oriented application experience on product and solution innovation.

## PROJECT OVERVIEW

---

Ras Laffan is situated along the northeast coast of Qatar overlooking the Arabian Gulf. Its strategic location at the center of the Arabian Gulf, between the Far East and Europe on the international maritime shipping route, enables hydrocarbon products to be efficiently transported to markets all over the world. The project team identifies risks for waiting times in the port rules and recommended preferred port rules having the lowest chance on waiting time, whilst having the highest port throughput potential. Additionally, the team drafted berthing procedures and queuing priority rules. This extensive study is an important element in the development of the Ras Laffan and Mesaieed ports, ensuring it is ready for the future.

The Mall of Qatar is the largest shopping center in Qatar, with an estimated 20 million customers anticipated annually. Fire alarm systems are expected to help protect people, property, and assets. As with any other system, electronics and other components can degrade over time and compromise the system's operation. Dust, dirt, and other contaminants can cause problems with smoke detectors. Such things as vandalism, remodeling, and improper maintenance procedures can also damage fire protection equipment. Test and calibration of alarm sensors, simulation of inputs and testing the annunciators, setting sensitivity, Checking the battery for corrosion and expiration date are procedures under the fire alarm maintenance.

Re Facebook Installation at Al Oqda in Wilayat, Barka, Oman

Paul may I thank you and the whole team for the outstanding performance on the Facebook installation at Al Oqda in Wilayat, Barka, Oman. Despite the challenging environment and with incomplete build information, your team executed and completed this project to an excellent standard.

In particular may I highlight the first class communications between your team, Indigo and the Facebook teams in multiple locations across the EMEA. It is a partnership with Garnet Technologies that is in its infancy but one I feel very confident will provide Indigo with a solid platform to deliver more business within the Gulf region.

With Kind Thanks

## PROJECT OVERVIEW

---

The sheer scale of the Mall of Qatar is breathtaking, with over 500 shops (introducing 80 new brands to Doha) and more than 100 F&B outlets. The most defining feature of the Mall of Qatar is the 'Oasis', a landscaped 30-metre-high atrium. This dynamic space is landscaped with planted beds and living, tree-like support structures. Walkways are attractively curved, and restaurants lining the routes look onto a unique entertainment feature – a custom-fitted, revolving, and multi-lift stage on which entertainment is provided all year round. Life Safety Systems includes architectural systems that provide emergency egress and protected areas within buildings through physical layout and construction and mechanical systems that include fire suppression systems such as sprinklers, smoke removal, stairwell pressurization, water storage and pressurization, and other similar systems

## PROJECT OVERVIEW

---

The New Port Project (NPP) Steering Committee and Al Jaber Engineering (JEC) signed a contract for designing and constructing food security facilities and warehouses at Hamad. The facilities of the project will be developed and constructed on an area of approximately 53 hectares (about 530,000 square meters). The project consists of specialized facilities for the processing, manufacturing, and refining of rice, raw sugar, and edible oils. These products will be available for local, regional, and global use. In the Domain of Electrical Networking efficient detailed designs that economize the use of electrical energy were designed.

Msheireb Properties partnered with industry leaders and experts in order to align the architectural lessons of the past with the latest in eco-friendly technologies – to realize an architectural language that is relevant, enriching and truly Qatari. The entire project features sustainable design that consumes fewer resources, generates less waste, costs less to operate, and achieves a reduced carbon footprint. The turnstiles can accommodate the movement of 15 to 20 people per minute and is finished to blend in with existing perimeter security. In addition, they are integrated with access control software such as push button, keypad, or card reader. A full height turnstile is an excellent deterrent to protect the property from unauthorized individuals.
